

Pet Protector Hunter Valley (NSW)

Our original Pet Protector disc is 2.5 cm (0.984252 inches) in diameter, silver color, with the "PET PROTECTOR" title in capital letters engraved on the front side.

>> WHAT IS PET PROTECTOR?

The **Pet Protector** is a metal disc charged with **atom of energy waves** (magnetic) that repel all external parasites, especially fleas and ticks. It is designed for external use only.

>> HOW DOES IT WORK?

The Pet Protector Disc works without incorporating any battery, the **'POWER'** supply is the natural **"magnetic field"** in our environment and the animal motion creates the induction of the charged magnetic disc to the magnetic fields in our natural environment.

It creates an effect like static electricity that parasites avoid as it is an unpleasant environment for them.

Once you attach the Pet Protector Disc to the pet's collar for the disc to be effective, it **MUST** stay attached to the collar permanently. Including when you give your pet a bath or even if you have your pet x-rayed by your veterinarian. If the collar must be removed try to keep the collar within the vicinity of the pet (i.e. underneath or next to them) to allow the energy fields to allow enough strength to repel.

It is 100% WATERPROOF.

>> WHAT IS IT USED FOR?

These waves allow the creation of a protective field, driving away / repelling all external parasites which stops new ones being hosted by your pet.

Pet Protector is used to prevent fleas and ticks and it is one of the safest anti-parasitic systems. It is effective in dogs and cats of any age (even newborns) and weight, including sick, convalescent and pregnant pets.

>> WHAT ARE THE EFFECTS OF CHEMICALS ON YOUR PET'S HEALTH?

There are thousands of pesticides, oral medications, sprays, dips, shampoos, and powders that are approved to control fleas and ticks on cats and dogs. Some products kill only ticks or adult fleas-others break the flea life cycle by preventing flea eggs from developing into adult fleas. Most of those products contain insecticides, which should not be used on pets that are sickly, pregnant, or nursing, or with certain drugs that may interact with the insecticide.

OWNER INFO ALERT: Insecticide can endanger the health of your pet, especially the liver. After applying the product, if your pet shows symptoms of illness after treatment, call your veterinarian. Symptoms of poisoning may include poor appetite, depression, vomiting, diarrhea, or excessive salivation.

The **Pet Protector** Disc is not such a product.

The Pet Protector Disc works without an insecticide and can be used in sick, convalescent and pregnant dogs and cats.

You don't need to use protective gloves and wash your hands after touching it.

There are NO CONTRAINDICATIONS

>> WHY CHOOSE PET PROTECTOR?

Pet Protector is the world's only pet protection from external parasites with 96+% effectiveness.

Other chemical anti-parasite products provide up to maximum 90 % effectiveness.

>> HOW LONG DOES IT WORK FOR?

Compared with other anti-parasite products that have to be applied over and over every month, **Pet Protector** is your pet's guardian for a 4 **year period**. If you compare how much money you would have to spend for another product in a 4 year period, **Pet Protector** cost a minimum of up to 6 times less!

>> IS IT REALLY SAFE?

- Pet Protector is the safest anti-parasitic system available today
- Pet Protector is **NON-TOXIC** and contains **NO CHEMICAL** elements.
- Pet Protector helps better blood circulation and therefore strengthens the immune system and initiates detoxification

>> CAN I USE PET PROTECTOR ON MY PUPPY OR KITTEN?

Pet Protector Disc can be used from the **first day** of your pet's life.

OWNER INFO ALERT: It's important for pet owners WHO USE CHEMICAL PRODUCTS to read the label and follow the directions carefully. If the label states that the product is for animals of a certain age or older, DO NOT use the product on pets that are younger. Puppies and kittens are usually too young for chemical products against fleas and ticks.

Pet Protector is non-toxic and contains no chemical elements; **THEREFORE IS COMPLETELY SAFE FOR YOUR NEWBORN PET.**

No need to wash your hands after touching it or to prevent your children playing with their pet.

>> HOW DO I USE PET PROTECTOR?

IMPORTANT: Apply the Pet Protector disc to a clean pet only

OTHERWISE, PARASITE LARVAE WILL ACCLIMATISE TO THE NEW ENVIRONMENT, BECOME RESISTANT AND CONTINUE TO REPRODUCE.

Pet Protector is **not a chemical** product and it does **not** kill the parasite, but only **protects your pet** from parasite attacks. It is important that your pet is completely (chemically) **cleaned of visible ticks and fleas**, and a plan of treatment or cleaning especially of their invisible larvae over the oncoming cycle is highly recommended before attaching the Pet Protector Disc.

7-20 days (depending on pet's size) is a period of "**receiving**" the frequency from the Pet Protector disc, which is why it is important that your pet does not have any larvae of the parasite, which could acclimatise to the new frequency and continue breeding.

>> HOW MUCH DOES PET PROTECTOR COST AND HOW DO I ORDER?

Pet Protector Discs are \$83.90 each and can be ordered via
